Project Part IV: Implementation, Integration, and Testing

October 15, 2026

Due date: Thursday, December 4, 2025, by class time in Moodle, single PDF file.

Points: 100. **Weight in project grade**: 50%

Deliverables of Part III of the Project

This final part of the project involves submitting your software's complete, commented source code AND demonstrating your project to the instructor on Thursday, December 6 by class time. All the members of the team must be present at the demo. Deliverables:

1. ***Introduction*** & ***overview***. The *introduction* document (200 to 400 words) should concisely indicate changes and additions, if any, to your project's specifications and design. The *overview file* should provide a summary (1 or 2 pages) of your source code, indicating all program units and modules included in the code. Both the *introduction* and *overview* files should be submitted in a zip file containing the entire source code.

2. ***Source code.*** The documented source code of your program should be submitted separately as a zip file mentioned above.

3. ***Test cases***. Test cases will be illustrated by demonstrating the functionality of your software to the instructor. When your *demo* is scheduled, you should be prepared with the program "ready to run" and have a sequence of tests prepared. The instructor will try additional uses (tests) of the program and will ask you questions regarding the project.

Deliverables:

1. Project report containing:
    a. Phase 3 report with all the test cases
    b. All of your code
2. A zip file of your project (if applicable, include your executable).
3.

Grading of Part 4 of the Project

The final part of the project will be assessed using to the following criteria: completeness (roughly, this means implementation of level 1 requirements), correctness, and robustness of the software; programming style used, including code documentation; quality of the user interface; and quality of the demonstration, including answers to questions.
